Borrower Profile Page Redesign

Product Design Case Study Brief

For Product Design Candidates

Overview

This case study brief invites product design candidates to redesign the **Borrower Profile Page** within ClearGrid's collections CRM platform. The objective is to improve visual hierarchy, data grouping, and overall usability while creating a design that works seamlessly in both **English (LTR)** and **Arabic (RTL)** layouts.

The current interface is live and functional but has evolved organically over time. This presents an opportunity to apply fresh UX thinking and design clarity to create a more efficient, agent-friendly experience.

About ClearGrid

ClearGrid is a next-generation debt resolution partner helping institutions improve recovery, reduce cost-to-collect, and enhance customer experience across the full DPD (Days Past Due) spectrum. Using predictive AI, omni-channel orchestration, and real-time portfolio intelligence, ClearGrid creates a

resolution process that is faster, fairer, and more consistent for lenders and borrowers alike.

ClearGrid operates primarily in the **UAE** and **KSA (Saudi Arabia)** markets, serving clients across banking, BNPL, telecom, digital SMEs, and embedded finance sectors.

The Challenge

Current State Analysis

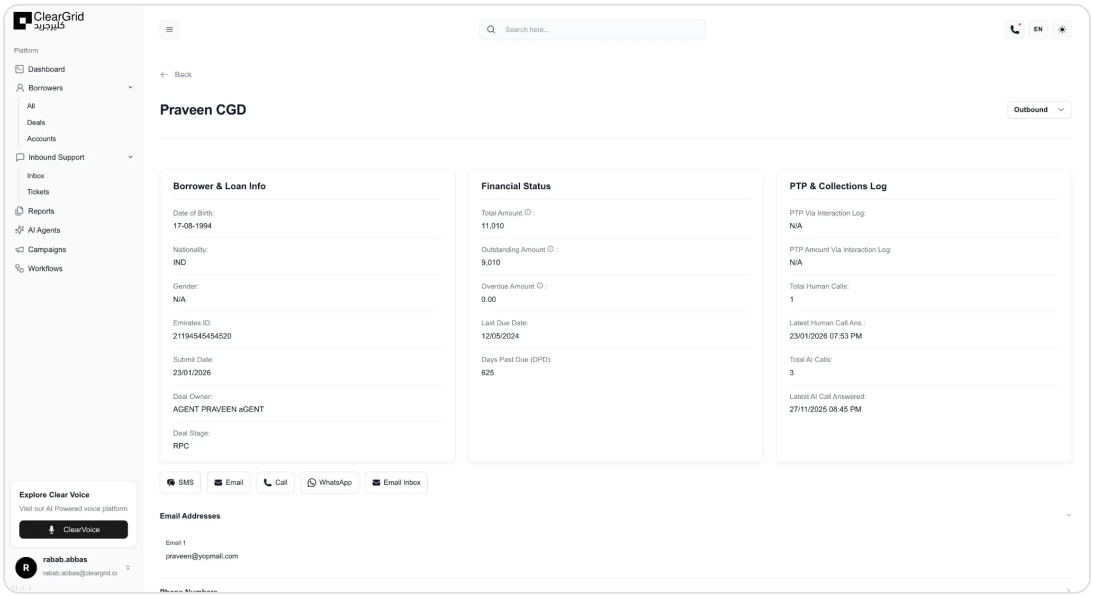

The existing Borrower Profile Page serves as the primary workspace for collections agents. After analyzing the current interface, several UX/UI issues have been identified that impact agent efficiency and user experience.

Issue Category	Current Problem	Business Impact
Visual Hierarchy	Information lacks clear visual distinction between primary and secondary data. Font sizes and weights are inconsistent.	Agents struggle to quickly locate critical borrower information, leading to longer call handling times.
Data Grouping	Related information is scattered across disconnected sections. Contact details, financial status, and interaction history are fragmented.	Increased cognitive load as agents must piece together related information from multiple areas.
Layout Efficiency	Excessive scrolling required to access key information. Poor utilization of screen real estate.	Reduced agent productivity and potential for missed critical data points.
Component Scalability	Current design lacks modular, reusable components.	Difficult to maintain consistency and scale as new features are added.
Bilingual Support	Limited consideration for RTL (Arabic) layout requirements.	Suboptimal experience for Arabic-speaking agents and markets.

Current Interface Screenshots

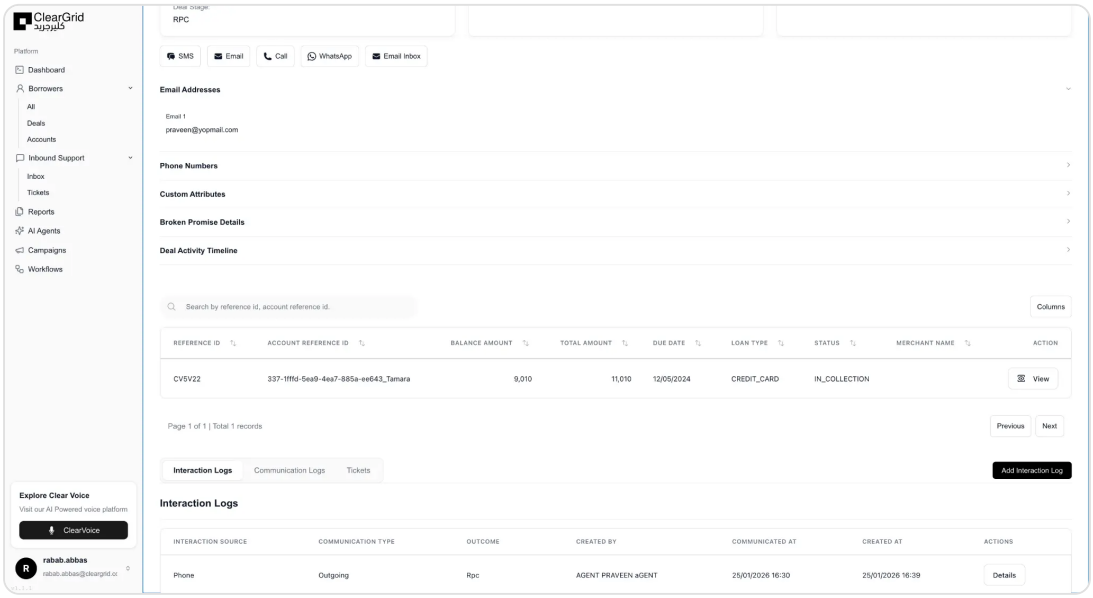

The following screenshots represent the current state of the Borrower Profile Page:

Screenshot 1: Main Borrower Information

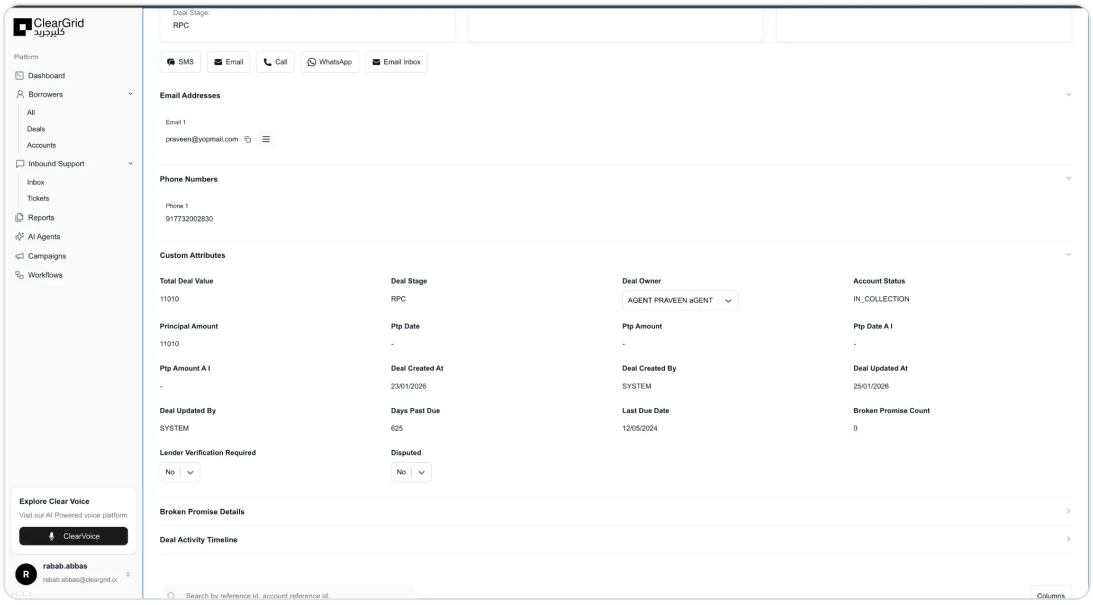

This view displays the primary borrower information including personal details, financial status, and PTP (Promise to Pay) collections log.

Screenshot 2: Deal Activity & Interaction Logs

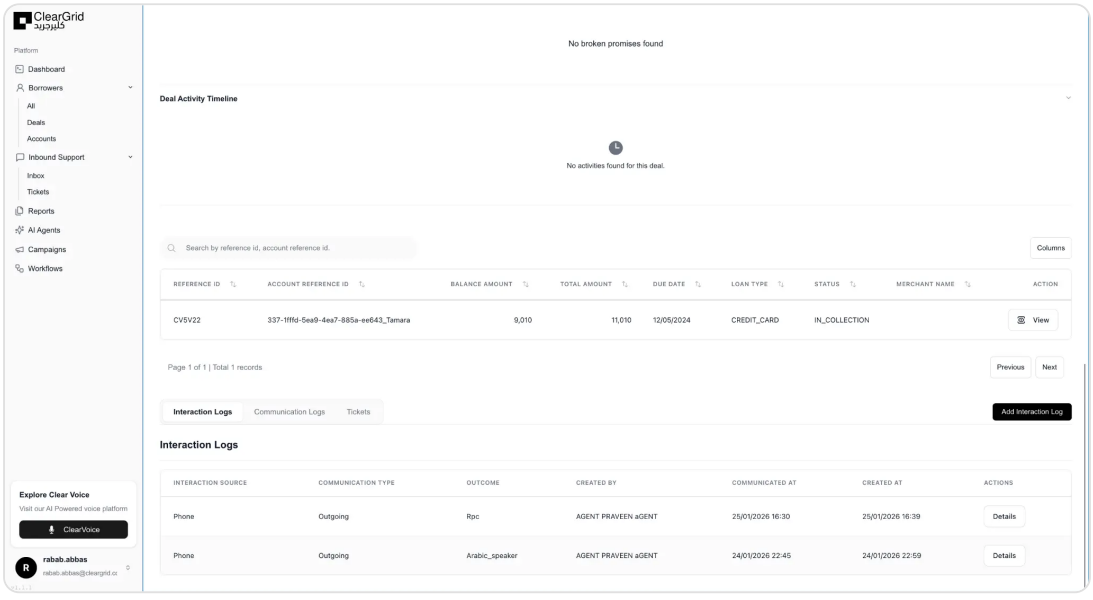

The lower section contains email addresses, phone numbers, and tabular data for interaction logs.

Screenshot 3: Custom Attributes & Extended Details

Custom attributes section displays additional deal information including payment dates, amounts, and system metadata.

Screenshot 4: Deal Timeline & Communication History

The deal activity timeline and expanded interaction logs.

Redesign Requirements

Your Redesign Should Include

1. Redesigned UI Layout (Desktop Only)

Create a comprehensive redesign of the Borrower Profile Page for both English (LTR) and Arabic (RTL) versions. The design should prioritize agent efficiency and quick access to critical information.

2. Improved Visual Hierarchy

Demonstrate clear thinking about which information should be prominent, grouped, collapsible, or tabbed. Consider the agent's workflow and prioritize information accordingly.

3. Component-Based Thinking

Design with modularity in mind. Create reusable components such as cards, tables, accordions, and action buttons that can scale across the platform.

4. UX Rationale

Provide a brief explanation (2-4 bullet points or a short Loom video) describing your thought process and how your redesign improves usability for collections agents.

Data Elements to Include

All of the following data must be represented in your redesign. You have full creative freedom to restructure and group these elements as you see fit.

A. Borrower & Loan Information

Field	Description
Name	Borrower name (Arabic + English)
Gender	Male/Female/N/A

Nationality	Country code (e.g., IND, UAE)
Date of Birth	DD/MM/YYYY format
Emirates ID	National identification number
Deal Owner	Assigned agent name
Deal Stage	Current stage (e.g., RPC, PTP)
Visa Status	Employment/residency status
Submit Date	Date case was submitted

B. Financial Status

Field	Description
Total Amount	Original loan/debt amount
Outstanding Amount	Current balance owed
Overdue Amount	Amount past due date
Last Due Date	Most recent payment due date
Days Past Due (DPD)	Number of days overdue
Account Status	Current account state (e.g., IN_COLLECTION)

C. PTP & Call Logs

Field	Description
Total Human Calls	Count of agent-initiated calls
Total AI Calls	Count of automated AI calls
Latest Human Call Answered	Timestamp of last answered human call
Latest AI Call Answered	Timestamp of last answered AI call

PTP Via Interaction Log	Promise to Pay amount and date
Broken Promises	Type, date, and count of broken PTPs
Interaction Logs	Table of all interactions
Communication Logs	Table of all communications

D. Loan/Deal Data Table

For borrowers with multiple deals, display a table with:

Column	Description
Reference ID	Unique deal identifier
Account Reference ID	Linked account identifier
Balance Amount	Current balance
Total Amount	Original amount
Due Date	Payment due date
Loan Type	Type of loan (e.g., CREDIT_CARD)
Status	Current status
Merchant Name	Merchant (Arabic/English)
Action	View/Edit actions

E. Account Details (Expanded Deal View)

Field	Description
Payment Plan Status	Active/Inactive payment plan
Interest/EMI/Installment	Payment breakdown information
Lender Name & ID	Financial institution details
Principal Amount	Original principal
Schedule/Payment Flags	Payment schedule indicators
Timeline Entries	Chronological activity log
Custom Attributes	Lender verification, dispute status, etc.

F. Action Buttons

Action	Description
Call	Phone call initiation
SMS	Text message
WhatsApp	WhatsApp message
Email	Email composition
Email Inbox	View received emails

Bilingual Design Requirements

English (LTR) Version

- Standard left-to-right text flow
- Left-aligned labels and content
- Standard icon placement

Arabic (RTL) Version

- Right-to-left text flow and alignment
- Mirrored layout structure
- RTL-appropriate icon placement
- Arabic typography considerations

You may present these as two separate frames or pages in your Figma file. Proper RTL alignment and language mirroring is required for the Arabic version.

Deliverables

Deliverable	Format	Required
Design File	Figma file or link	Yes

English (LTR) Layout	Desktop web design	Yes
Arabic (RTL) Layout	Desktop web design	Yes
UX Rationale	Bullet points or Loom video	Yes

Evaluation Criteria

Criterion	Weight	Description
Visual Design Clarity	25%	Clean, professional aesthetic aligned with ClearGrid brand
UX Thinking	30%	Thoughtful hierarchy, grouping, and layout decisions
Arabic Support & RTL	25%	Proper RTL execution and bilingual design quality
Initiative & Ownership	20%	Bonus points for thoughtful touches and creative solutions

Timeline

> **Please complete and submit your redesign within 48 hours of receiving this brief.**

Questions?

If you have any questions about this case study or need clarification on any requirements, please reach out to your hiring contact.

Good luck!

We look forward to seeing your creative approach to this challenge.
